

## **Decision Dynamics Announces 2009 Results**

**2009 revenues increased 45% over 2008, as a result of the signing of a number of new license contracts**

**2010-04-22**

Calgary, AB - April 20, 2010 Decision Dynamics Technology Ltd. (the "Company") (Decision Dynamics; TSX-V: DDY), a leading provider of project cost control and productivity management software for the energy industry, today reported sales of \$467K and \$3.2 million for the three and twelve months ending December 31, 2009, respectively. The financial highlights presented below are for the Oncore™ continuing operation only, pursuant to the disposition of the Wellcore product line during Q3 2008.

2009 revenues increased 45% over 2008, as a result of the signing of a number of new license contracts during the year. The license contracts will provide approximately \$1.8 million in revenue to the Company over the contract terms. Of the \$1.8 million in revenue, approximately \$1.2 million has been recognized in 2009. Cost of sales for 2009 increased 7% over 2008. Although 2009 includes lower personnel related expenses than 2008, due to restructuring, this has been offset by higher third party consulting expenses to deliver customer projects, higher commissions on new license sales and expenses incurred to relocate the customer data centre facility. Total operating expenses for 2009 increased 14% over 2008, reflecting expenses incurred in execution of the Company's strategic objectives - recruitment of an experienced and talented sales, marketing and development teams, sales and marketing initiatives to build the customer opportunity pipeline, investments in the Oncore™ technology and restructuring.
